

Patient Catheterization Workflow

⚙ Status	In progress
👤 Assign	Ⓜ Mennah Allah

1. Patient Arrival

Decision: How did the patient arrive?

A. Emergency Case (From ER)

- Patient requires immediate intervention.
- Proceed to Emergency Assessment.

B. Scheduled Case

- Patient has a pre-booked catheterization procedure.
- Complete registration and admission process.

2. Patient Identification & Information Collection

Decision: Is there an accompanying family member?

A. Family Member Available

- Collect patient information from the family member.
- Verify identity and medical history.

B. No Family Member Available

- Check patient's wallet, ID card, insurance card, or any available documents.

Decision: Is it a life-threatening emergency and no information is available?

Yes

- Immediate life-saving intervention required.
- Activate Three-Doctor Emergency Committee.

Three-Doctor Emergency Committee

Committee Responsibilities:

- Assess severity of the case.
- Confirm emergency status.
- Approve immediate intervention.
- Assume medical responsibility.
- Generate Direct Admission Form.
- Authorize immediate transfer to Catheterization Unit.

No

- Continue standard admission process.
-

3. Determine Catheterization Type

Type 1: Cerebral Catheterization

Responsible doctor :

- Neurologist / Neurointerventional Specialist

Type 2: Cardiac Catheterization

Responsible doctor:

- Cardiologist

Type 3: Peripheral Catheterization

Responsible doctor:

- Vascular Surgeon

Used for:

- Peripheral arteries
- Peripheral veins

Type 4: Interventional Radiology

Status:

- Under Development
-

4. Catheterization Procedure

- Patient transferred to Cath Lab.
 - Procedure performed by the responsible specialist.
 - Procedure findings documented.
-

5. Post-Procedure Management

Physician Responsibilities

- Create treatment plan.
- Define medications.
- Define follow-up requirements.

- Document procedure outcome.

Nursing Responsibilities

Medication Reconciliation

If patient has:

- Multiple diseases
- Multiple medications

The doctor knows from the patient's history

Nursing staff will:

- Identify all chronic diseases.
- Review current medications.
- Verify treatment compatibility.

Treatment Execution

- Administer medications.
 - Monitor vital signs.
 - Follow physician orders.
 - Document patient progress.
-

6. Discharge Planning

Decision: Is the patient ready for discharge?

Yes

Provide:

- Treatment plan
- Medication instructions
- Nutrition plan

- Lifestyle recommendations

Family Education:

- Explain procedure outcome.
- Explain medications.
- Explain warning signs.
- Explain follow-up requirements.

Follow-up Appointment:

- Weekly follow-up
- OR
- According to doctor's recommendation.

Patient History:

- Update complete medical history.
- Store procedure documentation.

No

- Continue inpatient monitoring.
-

7. Post-Procedure Complications

Decision: Did complications occur?

No

- Continue follow-up plan.

Yes

Decision: Is the complication related to the procedure itself?

Yes

- Follow-up by the Doctor who performed the catheterization.

No

- Consult appropriate specialist according to diagnosis.

Examples:

- Neurology
 - Cardiology
 - Vascular Surgery
 - Intensive Care
 - Other specialties
-

8. Further Treatment Options

Based on patient condition:

Option 1: Medical Treatment

- Medication management
- Conservative treatment

Option 2: Stent / Balloon Intervention

- Balloon angioplasty
- Stent placement

Option 3: Open Heart Surgery

- Surgical intervention if required
-

End of Workflow

Patient enters Long-Term Follow-Up Program:

- Periodic assessment
- Treatment adjustment
- History updates

- Outcome monitoring

PATIENT WORKFLOW – CATHETERIZATION PROCEDURE
